

Body Worn Cameras

Point Blank IRIS CAM and Genetec Clearance

With more than 40 years of dedicated service to law enforcement, Point Blank's capabilities extend beyond body armor and ballistics to advanced digital technologies, including the IRIS CAM body-worn camera.

The IRIS CAM can help agencies improve evidence collection and enhance officer accountability. Built in a ruggedized enclosure, the IRIS CAM provides ultra-high definition recording with a 140° FOV, for getting even closer to the action. Additionally, the IRIS CAM ensures not a moment is missed with 30 seconds of pre-recording and a long lasting lithium polymer battery that can last an entire shift.

Integration of the IRIS CAM system with Genetec Clearance™ allows for quicker uploads, saving officers time at the end of their shift. Once uploaded, the video can be viewed immediately, without the need for conversion. Post-incident tagging can also be added to the recording, to help with further classification of the event and to aid in locating the file for future searches or investigations.

Key Benefits

- ▶ Improve collection of evidence with a plug-and-play solution that automatically uploads video to Genetec Clearance
- ▶ Capture live events as they occur with one-touch recording and up to 30 seconds of pre-recording
- ▶ Enhance agency transparency and efficiently resolve complaints and officer-involved incidents

Key Features

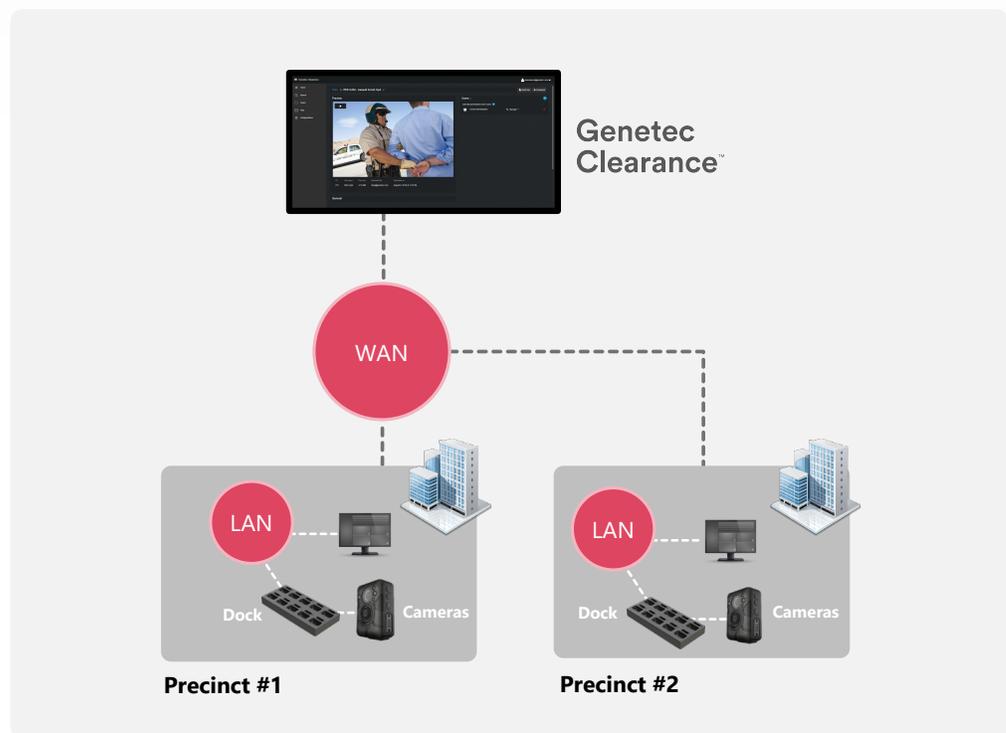

- ▶ Video resolution of 1296p, 1080p, 720p and 480p
- ▶ Up to 64 GB of storage
- ▶ Continuous recording time of 300 minutes
- ▶ Up to 30 seconds pre/post recording
- ▶ 140° viewing angle
- ▶ Built-in 2" TFT-LCD high-res color display
- ▶ IP 65 weather resistant
- ▶ Auto IR turn on/off up to 45 ft. in total darkness

Genetec Clearance is hosted in a dedicated tenant on the Microsoft Azure cloud, which does not share any software components with other organizations. With built-in virtual networking and load balancing, the Genetec Clearance architecture is built for high-availability and scalability, allowing agencies to add additional body-worn cameras and upload new evidence as required, without impacting the service.

This architecture, coupled with the robustness of the underlying cloud platform, allows Genetec to provide a 99.95% uptime guarantee. The underlying platform also provides both FedRAMP and CJIS compliance.
