

Justice and public safety portfolio

A portfolio designed to keep your city safe

Urban centers are the most populated area of any region. That's why public safety agencies need new technology to keep citizens safe. But deploying new technology throughout a city can cause management inefficiencies and data overload. Our portfolio addresses this challenge by providing a unified platform that helps you manage your city-wide security technology.

Deploying city-wide technologies like automatic license plate recognition (ALPR) and video monitoring systems (VMS) requires time and commitment. And police officers worldwide already have their plates full with an increasing number of responsibilities. The Genetec™ justice and public safety portfolio helps public safety agencies manage their physical security and digital evidence in a single platform.

Key components

Video management

Manage city-wide surveillance all from one place with our unified video monitoring platform—centralized for better situational awareness.

Automatic license plate recognition

Identify, track, and monitor vehicles of interest by tagging suspicious behavior to optimize your crime response and improve overall investigation time.

Vehicle-centric investigation

Gather the information you need to solve crime quickly. Get an intuitive, cloud-based solution with purpose-built cameras to collect rich vehicle-based evidence in all conditions. Easily filter and locate vehicles of interest based on testimonials and suspicious behaviors.

Real-time crime center

From one single application, you can manage all your cameras, ALPR, IoT, GPS, and more. Citigraf™ is a front-end solution for real-time crime centers that provides you with greater situational awareness.

Community Connect

Facilitate video and evidence sharing for public and private partnerships by having the ability to manage selective accessibility rights for privately owned cameras for law enforcement with Community Connect™.

Interview Room application

Ease the interview process with instant audio and video recordings upon entry to a room, indexed alongside any notes. Assign case numbers, designate recording access privileges, and retrieve interview sessions, all encrypted and securely stored in the cloud.

Digital evidence management

Optimize the way you gather and share evidence with Genetec Clearance™, our digital evidence management system. Quickly request, share, manage, and reference crucial evidence to aid your investigations.
