

## Press Release

# Genetec announces alignment with ACSC's Essential Eight cybersecurity framework

**SYDNEY, May 6, 2025**—[Genetec Inc.](#) (“Genetec”), the global leader in enterprise physical security software, today announced it has been assessed to align with the Australian Cyber Security Centre’s (ACSC) Essential Eight threat mitigation requirements, as verified by CyberCX.

Developed in partnership with the Australian Government, the ACSC’s Essential Eight framework outlines a comprehensive set of cybersecurity controls designed to mitigate major cyber threats and address vulnerabilities across IT systems. By adopting the Essential Eight framework, organisations strengthen their security posture, enabling them to better defend against and minimize the impact of cyberattacks.

The Essential Eight Maturity Assessment demonstrates how Genetec ensures the protection of sensitive information within a robust compliance framework. This achievement positions Genetec as a trusted provider of advanced physical security solutions for Australian government organisations, businesses, and critical infrastructure providers.

“Today, every organisation’s risk and compliance strategy must integrate advanced cybersecurity measures where both IT departments and the C-suite are confident in their providers’ physical security posture. The technology that underpins this stance is paramount and must match and/or exceed policy mandates,” said George Moawad, Country Manager for Oceania, Genetec Inc.

“Essential Eight alignment means that our customers can now be even more confident in the cybersecurity posture of Genetec. However, just as the Essential Eight continues to evolve, so must preventative measures. By implementing controls such as those detailed in the Essential Eight, enterprises and government organisations can reduce the likelihood of falling victim to an attack,” Moawad added.

Genetec is committed to supporting Australian customers through its nationwide team, network of accredited channel partners, adherence to regulatory standards, and collaboration with Australian government agencies.
